

Mohammad Syaoqi Ramadhan

✉ msyaoqi24@gmail.com ☎ 0895-3938-22292 📍 Bekasi 💻 in/msyaoqiramadhan/ 🌐 github.com/Syaoqi24

Physics graduate with hands-on experience across three technical domains: scientific research, government data operations, and web-based system development. Built and deployed Python automation tools with full error handling and output validation, a live web dashboard (HTML/CSS/JS + Google Sheets API), and a PHP-MySQL reporting system. Trained in systematic measurement, anomaly detection, and structured reporting from two research stints at Indonesia's National Research and Innovation Agency (BRIN). Continuously expanding into fullstack development, applying a research background in systematic experimentation to learning new programming paradigms

Work Experiences

Balai Besar Pelatihan Vokasi dan Produktivitas Bekasi

Nov, 2025 – present

Data and Information Analyst

Bekasi, Jawa Barat

- Designed and executed an end-to-end analytics solution to monitor participant performance KPIs across 20 training programs and 225 participants achieving an overall realization rate of 95.56% through data-driven reporting.
- Built an interactive Looker Studio dashboard replacing manual Excel reporting, enabling real-time visualization of absorption rates and program realization across 7 vocational tracks. Translating complex operational data into clear business insights for supervisors and coordinators.
- Developed Python automation scripts for data processing and document workflows, reducing manual errors and improving analytical pipeline efficiency. Applied programming skills in a live operational environment.
- Applied data modeling and analysis on multi-variable institutional datasets (PBL, TMT, PBK, NON-APBN schemes), identifying performance trends and supporting data-driven decision-making for program coordinators.
- Collaborated cross-functionally with field coordinators, operational teams, and institutional leadership to define data requirements, validate analysis results, and deliver actionable insights aligned with program objectives.

National Research and Innovation Agency (BRIN)

Oct, 2024 – Mar, 2025

Student Researcher

Cisitu, Bandung

- Independently designed and executed an end-to-end analytical study on perovskite solar cell performance, applying statistical modeling and data analysis techniques to evaluate efficiency degradation patterns across 50+ experimental devices.
- Applied quantitative modeling using SCAPS-1D simulation software and OriginLab to derive data-driven insights from experimental results, I am developing practical skills in applying analytical models to real research problems.
- Translated complex experimental data into clear visualizations and structured analytical reports using Excel and OriginLab, presenting findings and insights to supervising researchers during project evaluations.
- Collaborated with multi-disciplinary research teams on project execution, characterization analysis, and published manuscript preparation, demonstrating ability to work effectively in project-based, cross-functional environments.

National Research and Innovation Agency (BRIN)

Des, 2023 – Feb, 2024

Research Student

Serpong, Tangerang Selatan

- Collected and processed experimental datasets on transparent conductive oxide thin films, applying data cleaning, visualization, and performance analysis techniques using Excel and OriginLab.
- Analyzed material performance trends and prepared structured analytical reports regularly presented to supervising researchers, where I built strong habits in accuracy, reliability of results, and clear insight communication.
- Supported end-to-end research project operations from data collection through final reporting, gaining foundational experience in applying analytical workflows within a structured R&D environment.

Projects

Toko Buah Segar – E-commerce Web App (PHP, MySQL)

- Built a full-stack fruit store web application with public catalog and admin CRUD panel, then refactored it from procedural PHP into an object-oriented architecture – extracting duplicated logic into Database, Auth, and Produk classes to eliminate repeated code across 5+ files and improve maintainability.
- Applied object-oriented principles (encapsulation, singleton pattern, separation of concerns) learned through Coding Camp Dicoding x DBS Foundation 2.0.
- Closed a minor SQL-injection risk in the original implementation by moving remaining raw queries to prepared statements

as part of the refactor.

- GitHub: <https://github.com/Syaoqi24/Learning-Web-Dev/tree/main>

Job Market Analysis – Python, Pandas, Google Colab

- Built end-to-end data pipeline integrating 3 heterogeneous sources (RemoteOK API, Arbeitnow API, Kaggle LinkedIn dataset) totaling 85,000+ job postings.
- Performed data validation and cleaning, identifying and correcting a critical column mislabeling error before analysis to ensure result accuracy.
- Delivered insights on skill demand, industry distribution, and remote work trends across three data sources with distinct credibility levels.
- GitHub: [Syaoqi24/Job-Market-Analysis: RemoteOK + Arbeitnow + LinkedIn datasets from kaggle](#)

Rekap Realisasi Pelatihan Vokasi Nasional

- Rekap Realisasi Pelatihan Vokasi Nasional – Excel, Looker Studio, Python automation
- Built a real-time training program dashboard for BBPVP Bekasi, pulling live data directly from Google Sheets. Features filterable views by program type, participant absorption charts, and vocational category breakdowns-giving stakeholders instant visibility into training realization without opening raw spreadsheets
- Processed and structured vocational training data in Google Sheets (cleaning, formulas, aggregation) then connected it to Looker Studio for real-time KPI monitoring. This streamlined how the team tracked program realization, replacing manual spreadsheet reviews with an interactive, always-updated dashboard
- Looker studio: [Rekap Pelatihan Uji Coba Program INTALA DASHBOARD](#)

Education

Universitas Islam Negeri Walisongo Semarang

Jun, 2025

Bachelor of Science S. Si (Material Physics)

Semarang, Jawa Tengah

- Graduated Cum Laude, GPA 3.54/4.00 | Thesis grade: 3.89
- Thesis: "Exploring the Effect of Tin (Sn) on Structural and Optoelectronic Properties of CsPbBr₃ Perovskite" which applied quantitative modeling (SCAPS-1D), statistical analysis, and data visualization to evaluate material performance.
- Strong academic foundation in physics-based quantitative reasoning, mathematical modeling, and data interpretation, directly transferable to analytics and modeling work in consulting contexts.

Technical Skills & Competencies

Data Management: SQL, MySQL, Data Quality Validation, Data Integration (multi-source datasets), Microsoft Excel (Pivot, XLOOKUP, Dashboard)

Data Analysis & Visualization: Statistical Analysis, Data Processing, Looker Studio, OriginLab, Data Visualization for Stakeholders

System Development: PHP (OOP, MySQL), Python (Automation, Pandas), JavaScript (Fundamentals)

Tools: Microsoft Office (Word, Excel, PowerPoint), Google Workspace, GitHub

Communication & Collaboration: Cross-functional Coordination, Stakeholder Reporting, Project Coordination, English – Business Level (TOEIC 550)

Certificates

- SQL and Relational Databases 101 — Cognitive Class | IBM Skills (Jul 2026)
- Pemagangan Nasional – MagangHub (Kemnaker RI) (Jun 2026)
- Asisten Pengembang Web – BNSP (Jun 2026)
- Belajar Data Penerapan Science dengan Microsoft Fabric – Dicoding (Aug 2026)
- Belajar Dasar Pemrograman Web | Javascript — Dicoding (May - Jun 2026)
- Basic of Data Analysis for Industry — BBPVP Ternate Kemnaker RI (May 2026)
- Introduction to Python Programming for Data Science Course — Dataquest.io (May 026)
- Laboratory Safety & Security Induction — BRIN RI KST Samaun Samadikun Cisitu, Bandung (Nov 2024)
- TOEIC Listening & Reading - ETS - PT International Test Center (Score: 550) (Valid until Dec 2027)
